Preprint typeset using LATEX style emulateapj v. 12/16/11

ux than Earth receives from the Sun today, and slightly outside the conservative habitable zone (runaway greenhouse/maximum greenhouse) The star is slightly larger and older than the Sun, with a present radius of $1.11 \pm 0.15 R$ and an estimated age of ~ 6 Gyr Thus, Kepler-452b has likely always been in the habitable zone and

Air pressure and wind - National Weather Service

The vertical pressure gradient is much larger than the horizontal pressure gradient (~ 100 x), yet winds don't blow straight up Why? Gravity acts to stop, or slow, the vertical flow of air, so vertical winds are much less than horizontal winds Most vertical winds are on the order of 1 mph, however some downdrafts and updrafts can be up to 60 mph

Radiation in the form of heat and light provides almost ...

close proximity !e diameter of the Sun is actually about 100 times larger than that of the Earth, and the distance that separates them—about 93 million miles—is equal to well more than 100 solar diameters !us the Earth seen from its constant benefactor would appear little larger than a dot in the sky
